

Capstone Project - The Battle of Neighborhoods

Opening an Ethiopian Cuisine Restaurant

Data

Our data will be sourced from three main sources, namely:

1. Open-source dataset of Toronto:
https://en.wikipedia.org/wiki/List_of_postal_codes_of_Canada:_M
2. Geocoder package: For sourcing of geographical coordinates i.e., latitude and longitude.
3. Foursquare API: For sourcing of venue data.

From the data gathered would be segmented into neighborhoods and analyzed to get more information such as the popular restaurants in Toronto, how many restaurants are there in a particular neighborhood, their proximity to each other and areas that could do not have as many restaurants.
